PROFESSIONAL SUMMARY

Full-Stack Software Engineer with hands-on production experience in React, Node.js/Express, and both relational (PostgreSQL) and NoSQL (MongoDB) databases. Comfortable taking a feature from schema design through deployment, and always looking to learn something new.

EDUCATION

Kwame Nkrumah University of Science and Technology

Jan 2025 – Present

MSc. Information Technology

University of Ghana

Sept 2019 – Aug 2023

BSc. Administration, Accounting

WORK EXPERIENCE

Full-Stack Software Engineer (Contract / Freelance) — ThesisFlow

Mar 2026 – Jun 2026

- Built a production multi-tier academic workflow management system with Node.js (Express), React (Vite), PostgreSQL, and Prisma ORM, implementing strict role-based access control across Students, Supervisors, and Department Coordinators.
- Implemented Socket.io event-driven WebSocket communication with isolated room channels (user, thesis, submission) for live feedback commenting, instant status transitions, and real-time unread-notification badges — no manual page refresh required.
- Integrated the Cloudinary Cloud Storage API with Multer middleware to support 25MB PDF/DOCX uploads, paired with a Google Docs Embedded Viewer fallback for in-browser document previewing.
- Designed a relational PostgreSQL schema in Prisma with indexed lookup fields, circular foreign key resolution, and an institutional 8-digit unique index number generator.
- Deployed the REST API and WebSocket server to Render with pooled cloud database connections, and shipped the React frontend to Vercel with SPA routing rewrite rules.

PROJECTS

FantasyDuel GH — Fantasy Premier League Peer-to-Peer Wagering Platform

Tech Stack: React (Vite), Node.js, Express, PostgreSQL, Prisma ORM, Paystack API, Tailwind CSS

 Code: github.com/odai307/fantasy-duel  Live Demo: fantasy-duel-gh.vercel.app/

- Built a real-time sync pipeline against the official Fantasy Premier League API to pull manager squads and live match points, and to auto-resolve deadlines across all 38 gameweeks.
- Integrated the Paystack API to process Mobile Money (MTN MoMo, Telecel, AT Money) and card deposits, plus automated withdrawals, for fantasy managers across Ghana.
- Engineered ACID-compliant PostgreSQL transactions for an atomic wallet and escrow ledger, covering balance validation, entry-fee deductions, instant refunds on duel cancellation, and paginated transaction history.
- Created 1v1 head-to-head duels alongside multi-manager private/public pools, with custom invite codes, capacity locks, and live leaderboards.

TutorConnect — Full-Stack Peer Tutoring & Mentorship Marketplace

Tech Stack: React (Vite), Node.js, Express.js, MongoDB, Tailwind CSS

 Code: github.com/odai307/tutor-connect  Live Demo: tutor-connect-iota.vercel.app/

- Built a peer tutoring platform connecting students with verified tutors, with dual-role dashboards, subject discovery filtering, booking approvals, and JWT/Bcrypt authentication.
- Built Express REST APIs and MongoDB/Mongoose models covering subjects, the full booking lifecycle (pending, accepted, declined, completed), and ratings.
- Implemented contextual direct messaging tied to each booking session, with persistent MongoDB conversation history, auto-scroll UI, and timestamp formatting.

TECHNICAL SKILLS

Programming Languages: JavaScript, Python

Backend & Runtime: Node.js, Express.js, WebSockets (Socket.io), REST APIs, JWT Auth

Frontend Technologies: React.js, CSS, HTML, Tailwind CSS

Databases & ORMs: PostgreSQL, MongoDB, Prisma ORM

Tools & Practices: Git, GitHub, Postman, CI/CD, API Design, System Design
